

Laca

Uma só língua nunca basta

Je suis désolé de vous quitter, mais je dois acheter un chapeau.

WIR WOLLEN IHRE RÜHE UND SCHAFE SEHEN

Pað er nú verra, ferðaveðrið

¿Me lo puede repetir, por favor?

Três tristes tigres

You talk when you cease to be at peace with your thoughts.

Suculent

Crassulaceae

Echeveria lilacina

In botany, succulent plants, also known as succulents or sometimes fat plants. The word succulent comes from the Latin word *sucus*, meaning juice, or sap.¹ Succulent plants may store water in various structures, such as leaves and stems.

Echeveria lilacina, common name **Ghost Echeveria** or **Mexican Hens** and Chicks, is a species of succulents in the genus *Echeveria* belonging to the family Crassulaceae. The genus name *Echeveria* was given in honor of the 18th century Mexican botanist and painter *Atanasio Echeverría y Godoy*, famous for his paintings of plants.

As plantas suculentas são aquelas nas quais a raiz, o talo ou as folhas foram engrossados para permitir o armazenamento de água em quantidades muito maiores que nas plantas normais. Esta adaptação lhes permite manter reservas do líquido durante períodos prolongados, e sobreviver em ambientes áridos e secos que para as outras plantas seriam inabitáveis.

O exemplo mais típico de suculência é a dos cactos, cujos talos apresentam uma grossa capa de tecido parenquimatoso. Além dos cactos outras diversas famílias vegetais apresentam o mesmo fenômeno.

Sukulenty, rośliny gruboszowate (łac. *succulentus* – soczysty) – grupa kserofitów, czyli roślin, które przystosowały się do życia w warunkach ograniczonej dostępności wody wykształcając tkankę wodną służącą do jej gromadzenia oraz szereg dalszych adaptacji w budowie i fizjologii.

Do roślin gruboszowatych, zaliczane bywają też rośliny różnych siedlisk, jak np. gatunek *Crassula helmsii*² będący rośliną wodną.

Some definitions also include roots, so that geophytes that survive unfavorable periods by dying back to underground storage organs may be regarded as succulents.

Crassula helmsii
(aquatic plant, succulent)

Laca

Laca is a semi sans serif inspired by retro Portuguese packaging of soaps. Laca is the portuguese word for hairspray. The starting point was to design a typeface that would bring a familiar feeling of closeness and warmth but giving it a modern look ensuring it works well on modern platforms. It's a lively typeface that brings texture and personality to the text. Perfect for branding and for all communications. There is a upright italic version available through the stylistic set that brings even more friendliness to the font.

The result is versatile typeface that has many OpenType features that brings stylist alternates to the designer.

About Ndiscover:

Ndiscover is a digital typography studio based in Lisbon and Porto. It all started when Joana Correia and Natanael Gama decided to join forces and create their own fonts, following their own feelings, intuitions and perceptions about the type design world. They believe that joined forces are even greater, as it was said since long: the whole is bigger than the sum of its parts. At this moment Ndiscover is creating its own library while doing commissioned work for companies around the world. Our mission is to produce quality typefaces with a lot of personality for demanding graphic designers.

We specialize in developing typefaces for clients. We design many different scripts, from Latin, Greek and Cyrillic. We have also designed and produced Devanagari, Tamil and Malayalam typefaces.
